## **CLAIMS**

## What is claimed is:

- 1. A carrying bag for a brass instrument, comprising:
  - a shell having an interior and made of flexible material, said shell having opposite end portions;
  - a transport member secured to the shell; and
  - a stiffening frame made of a firm material and arranged in the interior of the shell at one of the end portions adjacent to a bell of a brass instrument.
- 2. The carrying bag of claim 1, wherein the transport member is a handle.
- 3. The carrying bag of claim 1, wherein the frame is made of plastic.
- 4. The carrying bag of claim 1, wherein the frame is made of acrylonitrile-butadiene-styrene copolymer (ABS).
- 5. The carrying bag of claim 1, wherein the frame is made of propylene.
- 6. The carrying bag of claim 1, wherein the frame is made of nylon.
- 7. The carrying bag of claim 1, wherein the frame is made of light metal.

- 8. The carrying bag of claim 1, wherein the frame is made of aluminum.
- 9. The carrying bag of claim 1, wherein the frame is made of wood.
- 10. The carrying bag of claim 1, wherein the frame is attached interiorly to the shell by a connecting process selected from the group consisting of gluing, riveting, screwing, and Velcro-fastening.
- 11. The carrying bag of claim 1, wherein the frame is clamped interiorly to the one end portion.
- 12. The carrying bag of claim 1, wherein the stiffening frame is a separate component of closed configuration.
- 13. The carrying bag of claim 1, wherein the stiffening frame includes a ring-shaped closed end piece and a rim portion attached about the end piece and pointing toward the interior of the shell.
- 14. The carrying bag of claim 1, wherein the end piece has a width of about 2 cm to 6 cm, and the rim portion has a width of about 2 cm to 6 cm.
- 15. The carrying bag of claim 13, wherein the end piece includes a straight bottom strip and a U-shaped arcuate strip placed onto the bottom strip.

- 16. The carrying bag of claim 1, wherein the end piece has a circular configuration.
- 17. The carrying bag of claim 1, wherein the shell is comprised of three layers.
- 18. The carrying bag of claim 1, wherein the frame rests against an inner one of the three layers.
- 19. The carrying bag of claim 18, and further comprising a padding between the frame and the bell of the brass instrument.
- 20. The carrying bag of claim 17, wherein the shell includes an outer layer of textile material, a middle layer made of upholstery material, and an inner layer made of a lining or cotton cloth.
- 21. The carrying bag of claim 20, wherein the upholstery material is foam.
- 22. The carrying bag of claim 1, wherein the one end portion extends in a vertical direction, when the brass instrument is received in the interior of the shell and carried.

- 23. The carrying bag of claim 1, wherein the one end portion extends at an inclination with respect to a vertical, when the brass instrument is received in the interior of the shell and carried.
- 24. The carrying bag of claim 1, wherein the one end portion is substantially planar.
